Developer Guide > API > Campaign Report

Stats API

Stats API allows you to fetch detailed campaign stats synchronized in real time. This API fetches data at the platform level and provides data for all types of campaigns.

API Endpoint

Method: **POST**

API Endpoint

```
1 https://api-{{0X}}.moengage.com/core-services/v1/campaign-stats
```

Each customer is hosted on a different data center; you can find your data center number (value of X) by checking the [data center and API endpoint mapping page](#).

Authentication

The API request will be authenticated through Basic Authentication. Basic Authentication sends a Base64-encoded string containing your username and password with every API request. It encodes a 'username: password' string in Base64 and appends the encoded string with 'Basic '. This string is included in the authorization header as shown below:

```
{"Authorization": "Basic Base64_ENCODED_APPKEY_APIKEY"}
```

You can obtain the username and password details from the MoEngage Dashboard.

1. Navigate to **Settings > Account > APIs**.
2. Copy the following details:
 - Username: Under **Workspace ID** (earlier App ID), click the copy icon to copy the username.
 - Password: In the **API keys** section, click the copy icon in the **Campaign report** to copy the API key.
3. Use these details to authenticate the API requests.

Request Headers

Search here...

Metrics	Required	Sample Values	Description
Content-Type	Required	{"Content-Type": "application/json"}	Set the Content-Type header to application/json.
Authorization	Required	{"Authorization": "Basic Base64_ENCODED_APPKEY_APIKEY"}	This authentication is necessary to pass the request. For more information on generating the authentication header, refer to Authentication.
MOE-APPKEY	Required	{"MOE-APPKEY": "Workspace ID"}	This is the workspace ID (earlier APP ID) of your MoEngage workspace, which should be passed in the request. You can find your MoEngage Workspace ID in the MoEngage Dashboard: Settings -> Account -> APIs -> Workspace ID (earlier app id) For more information, refer to Authentication .

Release Notes

request_id	Required	String	This field shows the request ID created by a user. Helps to know the API calls made by the client.
campaign_ids	Optional	Array of strings	This field shows the campaign IDs created, up to 10 max. per call
start_date	Mandatory	String	This field shows the start date of the campaign in YYYY-MM-DD format.
end_date	Mandatory	String	This field shows the campaign's end date in YYYY-MM-DD format. The days between the start and end dates should not exceed 30 days.
attribution_type	Mandatory	String	This field shows the attribution type that should be picked to show conversion stats. - VIEW_THROUGH - CLICK_THROUGH - IN_SESSION - TOTAL_CONVERSIONS - CLICK_CONVERSIONS
offset	Optional	Integer	This field shows the position of a record in a dataset. The default value for the number of campaigns to skip is 0. For example, set the offset to 50 to see the data from page 51.
limit	Optional	Integer	This field shows the maximum number of campaigns displayed on a page. The default and max limit is up to 10 campaigns.
metric_type	Required	String	This field shows the total or unique values of all the metrics. Supported values are: - TOTAL - UNIQUE

Metrics	Data Type	Description
response_id	String	This field indicates the response ID, which is the same as the request ID passed in the payload.
total_campaigns	Integer	This field indicates the total number of campaigns that are requested in the payload.
current_page	Integer	This field indicates the current page number.
total_pages	Integer	This field indicates the total page. It is equal to the total campaigns, which is limited to 10 for each call and 10 to be displayed for each page.
data	JSON Object	This object contains the campaign stats. For more information, refer to Data .

Release Notes

PUSH:

- ANDROID
- IOS
- WEB
- MWEB
- ALL_PLATFORMS
- UNKNOWN

OSM:

- WEB
- MWEB
- ALL_PLATFORMS
- UNKNOWN

All channels supported.

Note: Channels will be shown as a platform for those that don't have a platform name. For eg: EMAIL

locales	JSON Object	This field indicates the details of the locales configured.
variations	JSON Object	This object contains details of the variations of your locale. It has the following objects: • all_variations • campaign_control_group • global_control_group

All Variations

The all_variations JSON object contains the following information:

Search here...

Metrics	Data Type	Description
performance_stats	JSON Object	This object shows your campaign's performance metrics. To learn more about performance stats, click here .
conversion_goal_stats	JSON Object	This object shows the conversion goal stats of your campaign. To learn more about conversion_goal_stats, click here .
delivery_funnel	JSON Object	This object shows the delivery stats if your campaign. To learn more about delivery stats, click here .
failure_breakdown	JSON Object	This object shows the failure breakdown of your campaign. To learn more about failure breakdown, click here .

Global Control Group

Global controlled groups can be configured randomly or by uploading a user's list. To learn more about the Global controlled group, click [here](#).

The global_control_group JSON object contains the following information:

delivery_funnel	JSON Object	This object shows the delivery stats if your campaign. To learn more about delivery stats, click here .
failure_breakdown	JSON Object	This object shows the failure breakdown of your campaign. To learn more about failure breakdown, click here .

Campaign Control Group

A campaign control group can be created by combining the user base that qualifies for the campaign. To learn more about the campaign-controlled group, click [here](#).

The campaign_control_group JSON object contains the following information:

Search here...

Metrics	Data Type	Description
conversion_goal_stats	JSON Object	This object shows the conversion goal stats of your campaign. To learn more about conversion_goal_stats, click here .
delivery_funnel	JSON Object	This object shows the delivery stats if your campaign. To learn more about delivery stats, click here .
failure_breakdown	JSON Object	This object shows the failure breakdown of your campaign. To learn more about failure breakdown, click here .

Performance Stats

The performance_stats JSON object contains the following information:

Search here...

Metrics	Data Type	Channel	Description
attempted	Integer	- Push - Email - Connector - SMS - FB Audience - Google Ads Audience	This field shows the number of communication attempts made from a campaign.
sent	Integer	- Push - Email - SMS - Connector - Facebook Audience - Cards - WhatsApp	This field shows the number of communications sent from a campaign.
failed	Integer	- Email - SMS - Push - Connector	This field shows the number of communications that failed to reach customers from a campaign.
bounced	Integer	Email	This field shows the number of communications bounced for various reasons.

Release Notes

		• Cards • Web personalization	
click	Integer	• Email • SMS • In-App • WhatsApp • OSM • Cards • Web personalization	This field shows the number of times your users clicked the message from your communication.
opened	Integer	Email	This field shows the number of communications opened by the user from your communication.
delivered	Integer	• Email • SMS • Cards • WhatsApp	This field shows the number of communications delivered to the customer.
read	Integer	WhatsApp	This field shows the number of customers who read your communications
closed_click	Integer	• In-app • OSM • Web personalization	This field shows the number of messages closed by your customers by clicking the close button from your communication.
unsubscribe	Integer	Email	This field shows the number of customers who have unsubscribed from your email.
ctr (Click-Through rate)	Double	• Web personalization • Email • SMS • In-App • OSM • Cards • Connector • WhatsApp	This field shows the click-through rates(ctr) from your communication, which indicates the conversion event performed after clicking the message. Calculated as CTR = Clicks / Impressions
delivery_rate	Double	• Email • SMS • Cards • WhatsApp	This field shows the rate of delivery of your communication to the customers.
read_rate	Double	WhatsApp	This field shows the message rate of your communication that your customers have read. $\text{UniqueRead/uniqueDelivered} * 100$
successfully_synced	Integer	• FB Audience • Google Ads Audience	
sent_rate	Double	• Connector • Email • Push • SMS	This field shows the rate of your communication sent to your customers $\text{Sent/attempted} * 100$
failure_rate	Double	• Connector • Email • Push • SMS	This field shows the rate of failures of your communication. $(\text{attempted-sent})/\text{attempted} * 100$

Conversion Goals

The conversion_goal_stats JSON object contains the following information:

Search here...

Status	Data Type	Description
conversions	Integer	This field shows the number of conversions from your communication.
cvr (Conversion rate)	Double	This field shows the conversion rate for your communication.
uplift	Double	This field shows the percentage change in the performance metrics.

For more information on conversion goals, refer to the following documents:

- Push
- Email
- SMS
- In-App
- OSM
- WhatsApp
- Connectors

Delivery Funnel

The delivery_funnel JSON object contains the following information:

Search here...

Metrics	Data Type	Description
reachable_users_in_segment	Integer	This field shows the number of reachable customers in a segment.
segment_after_uninstall	Integer	This field shows the count of customers after uninstall.
after_fc	Integer	This field show the number of users obtained after removing emails that have crossed Frequency Capping as defined in the FC Settings from the After Invalid/Duplicate removal count.

Response Codes

Search here...

Status Code	Request State	Description
200	Successful response	This response is returned upon a successful request.
400	Bad request	Possible issues include duplicates, invalid data types, or missing mandatory attributes.
401	Unauthorized	This response is returned upon unauthorized request. Provide appropriate authentication credentials.
403	Forbidden	This response is returned when our account does not have access to the campaign stats management features. For further assistance, contact the MoEngage team.
429	Too many requests (No content)	This response is returned when the number of requests per minute has exceeded the rate limit.
500	Internal server error	This response is returned when the system runs into an unexpected error. For further assistance, contact the MoEngage team.

Refer to the [Sample Response](#) section for examples.

Postman Collections

We have made it easy for you to test the APIs. Click [here](#) to view it in Postman.

FAQ

1. What will the API response be if I pass the start date alone?
2. If I pass the start and end dates without any campaign ID, will I also get the child campaign stats?
3. How do we identify the stats belonging to the parent campaign in the response?
4. How can the parent-child relationship between campaigns be found?
